Chapter- 4
Limit State – Doubly Reinforced Beam

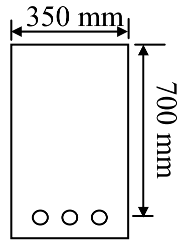
01. Ans: (c)

Sol: BM = 300 kN-m

Concrete $M_{15} = f_{ck} = 15$

Steel $f_y = 415$

f_{sc} =353.7 MPa



Eff. Cover d′ = 50mm

In LSM, we have to use Factored moment

$M_u = M \times \gamma_f$

$= 300 \times 1.5 = 450$ kN-m

Use $\gamma_f = 1.5$

calculate $M_{u\,limit}$

$M_{u\,limit} = 0.138\, f_{ck}\, bd^2$

$= 0.138 \times 15 \times 350 \times (700)^2$

$M_{u\,limit} = 355$ kN-m

$M_u = 450$ kN-m

$\therefore\ M_u > M_{ulimit}$

So we need to use 'DRB'

$M_{ulimit} = 0.87 f_y\, A_{st}\, (d\text{-}0.42\, x_{u\,max})$

$355\times10^6 = 0.87 \times 415 \times A_{st}(700 - 0.42\times0.48\times700)$

$A_{st} = 1759.31\ mm^2$

for extra moment we need to provide tensile steel & comp. steel

$M_u - M_{u\,limit} = 0.87 f_y (d-d')A_{st2}$

$(450-355) \times 10^6 = 0.87 \times 415 A_{st2}(700-50)$

$= 234682.5 A_{st2}$

$A_{st2} = 404.8 \simeq 405\ mm^2$

$A_{st} = A_{st1} + A_{st2} = 2165\ mm^2$

Now our purpose is to calculate 'A_{sc}'

$M_u - M_{ulimit} = f_{sc}A_{sc}(d-d')$

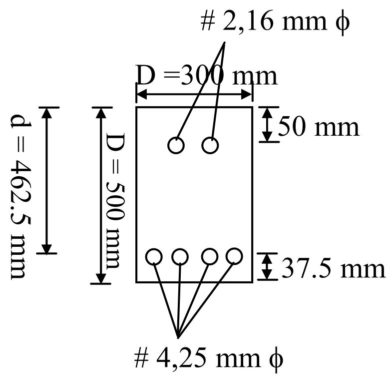
(or) $f_{sc}\ A_{sc} = 0.87\ f_y\ A_{st2}$

$A_{sc} = 413.2\ mm^2$

Common data for Questions 02 & 03

02. Ans: 270 kN-m

Sol:



b = 300 mm, D = 500 mm, d = 462.5 mm

f_{ck}= 25 N/mm^2, f_y = 415 N/mm^2,

$f_{sc} = 0.8566\ f_y$

$A_{st} = 4\times\frac{\pi}{4}\times 25^2 = 1963.495\ mm^2$

$A_{sc} = 2\times\frac{\pi}{4}\times 16^2 = 402.12\ mm^2$

$\Rightarrow C = T$

$\Rightarrow C_2 + C_2 = T$

$0.36\times f_{ck}\ b\ x_u + f_{sc}A_{sc} = 0.87\ f_y\ A_{st}$

$0.36\ \times 25\ \times\ 300\ \times x_u\ +\ (0.8566\ \times 415)\ \times$ $402.12 = 0.87\times 415\times 1963.495$

$x_u = 209.618$ mm

$x_{u\ max} = 0.48\times d$

$= 0.48\times 462.5 = 222$ mm

$x_u < x_{u\ max}$

$\therefore$ under reinforcement section.

$M_u = 0.36f_{ck}.b.x_u(d-0.42x_u)+f_{sc}A_{sc}(d-d^1)$

$= 0.36\times 25\ \times 300\times 209.6$

$(462.5-0.42\times 209.6) + (0.8556\times 415)$

$\times 402.12\ (\ 462.5-50)$

= 270.9 kN-m

03. Ans: 18.82 kN/m

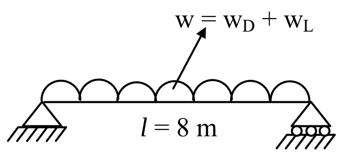
Sol: Working /line moment,

$M = \frac{270.9}{1.5} = 180.6 kN-m$

Self weight of beam, $w_D = (\gamma_c)\ b\times D$

$= (25kN/m^3)\times(0.3\times 0.5)$

W = 3.75 kN/m



$M = \frac{(w_D + w_L)\times l^2}{8}$

$180.6 = \frac{(3.75 + w_L)\times 8^2}{8}$

$w_L = 18.825$ kN/m

$$= 2.01 \text{ m} \not> c = 3 \text{ m}$$

$$\therefore\ b_f = 2.01 \text{ m}$$

02. Ans: (d)

$l = 6$, $l_0 = 3.6$ m, $b_f = ?$

$$b_f = \frac{l_0}{6} + b_w + 6D_f \not> c$$

$$= \frac{3.6}{6} + 0.3 + 6\times 0.1$$

$$= 1.5 \text{ m} \not> c = 3 \text{ m}$$
