(i) Infiltration in 30 minutes (or) 0.5 hr

$$= \int_0^{0.5} (3 + e^{-2t}) dt$$

$$= 3(t)_0^{0.5} + \left[\frac{e^{-2t}}{-2} \right]_0^{0.5}$$

$$= 3 \times 0.5 - 0.5 [e^{-1} - e^{-2 \times 0}]$$

$$= 1.816 \text{ cm}$$

(ii) Infiltration in 2nd 30 minutes

First we have to calculate infiltration in 0 hr to 1 hr

$$= \int_0^1 (3 + e^{-2t}) dt$$

$$= [3t]_0^1 + \left[\frac{e^{-2t}}{-2} \right]_0^1$$

$$= 3 - 0.5[e^{-2} - e^0]$$

$$= 3.432 \text{ cm}$$

But in question he ask next 30 minutes so we subtract

1st 30 min infiltration

$$= 3.432 \text{ cm} - 1.816 \text{ cm}$$

$$= 1.616 \text{ cm}$$

Sol: Volume of GW extracted = $3 \times 10^6 \text{ m}^3$

$$\text{area} = 5 \text{ km}^2$$

Drop in water table level = $102 - 99 = 3 \text{ m}$

Specific yield, $S_y = ?$

$$S_y = \frac{\text{volume of G.W extracted}}{\text{volume of aquifer}}$$

$$= \frac{3 \times 10^6}{5 \times 10^6 \times 3} = 0.2$$

03. Ans: (b)

Sol: $n = 0.3, S_y = 0.2,$

$A = 100\text{km}^2, \Delta\text{WT} = 0.25\text{m}$

Volume of GW extracted = ?

Volume of aquifer

$$= 100 \times 10^6 \times 0.25 = 25 \times 10^6 \text{ m}^3$$

Volume of GW extracted = $S_y \times$ Volume of aquifer
 $= 0.2 \times 25 \times 10^6 = 5 \times 10^6 \text{ m}^3 = 5\text{Mm}^3$

$$Q = KiA$$

$$V = Ki$$

$$V_d = \frac{V}{n}$$

(V = apparent or seepage velocity)

$$K = 4 \times 10^{-3} \text{ cm/sec.}$$

$Q(\text{m}^3/\text{day}/\text{m})$ width of aquifer = ?

$$Q = KiA$$

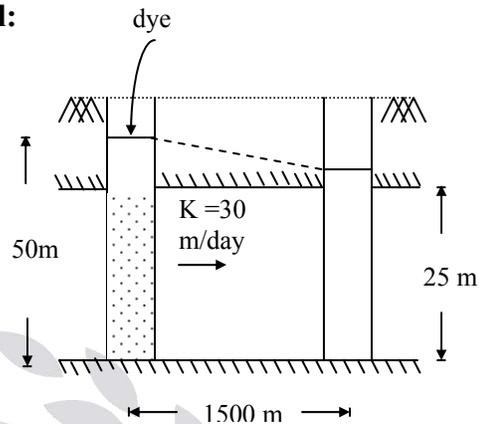

$$= \frac{4 \times 10^{-3} \times 10^{-2}}{1} \times \left(\frac{5.6 - 5}{290} \right) \times 1 \times \left(\frac{14.4 + 15}{2} \right)_{\text{avg.ht}}$$

$$Q = 1.216 \times 10^{-6} \text{ m}^3/\text{s}$$

Sol:

1500 m = Distance between wells.

$$h_1 = 50\text{m}, \quad h_2 = 25\text{m}$$

$$K = 30 \text{ m/day}$$

$$n = 0.25$$

Time of travel = ?

Tracer = Will not loose power & never reacts with soil or water & it flows with water.

$$\text{Time} = \frac{\text{Distance traveled by tracer}}{\text{seepage velocity}}$$

$$V_a = \frac{V}{n}, \quad V = Ki,$$

$$i = \frac{50 - 25}{1500} = 0.0167$$

$$K = 30 \times 0.0167 = 0.5 \text{ m/day}$$

$$V_a = \frac{0.5}{0.25} = 2 \text{ m/day}$$

$$\therefore \text{Time} = \frac{1500}{2} = 750 \text{ days}$$

$$Q = 925 \text{ lit/min} = 925 \times 24 \times 60 \times 10^{-3}$$

$$= 1332 \text{ m}^3/\text{day}$$

$$S_1 = 2.45$$

$$S_2 = 1.20\text{m}$$

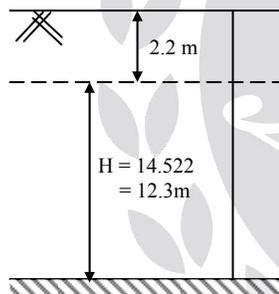

$$K = ?$$

$$h_1 = 14.5 - 2.45 = 12.05\text{m} - 2.2 = 9.85\text{m}$$

$$h_2 = 14.5 - 1.20 = 13.3\text{m} - 2.2 = 11.1\text{m}$$

$$Q = \frac{\pi k [h_2^2 - h_1^2]}{\ln[r_2/r_1]}$$
