## ESE- 2020 (Prelims) - Offline Test Series <br> MECHANICAL ENGINEERING

## Subject: Engineering Mechanics \& Strength of Materials + Mechanisms And Machines + Design of Machine Elements - SOLUTIONS

1. Ans: (c)

Sol:

$\mathrm{N}=$ Normal reaction
$\mathrm{f}=$ friction force
$\mathrm{R}=\mathrm{Net}$ contact force (Resultant of $\mathrm{N} \& \mathrm{f}$ )
$\mathrm{R} \sin \theta=\mathrm{ma}$
$\mathrm{R} \cos \theta=\mathrm{mg}$
$\therefore \mathrm{a}=\mathrm{g} \tan \theta$
02. Ans: (a)

Sol:
Before shear deformation

## After shear deformation

Shear strain $(\phi)=90^{\circ}-89.82^{\circ}$

$$
=0.18^{\circ}=0.18 \times \frac{\pi}{180}=\frac{\pi}{1000}
$$

3. Ans: (c)

Sol: Forces on a shoe in centrifugal clutch is shown below.

Here, $\left(\mathrm{P}_{\mathrm{cf}}\right)_{1}=$ centrifugal force $=\mathrm{m} \omega_{1}^{2} \mathrm{r}_{\mathrm{g}}$

- $\quad\left(\mathrm{P}_{\mathrm{cf}}\right)_{1}$ is balanced by an equal and opposite spring force. Thus, if rpm is doubled then spring force must be increased by factor of four.

4. Ans: (b)

## Sol:

Let, $\mathrm{m}=$ mass of block
$\mathrm{v}=$ velocity of block at point A
$h=$ height of centre of mass above ground
$\therefore$ Angular momentum about $\mathrm{C}, \overrightarrow{\mathrm{L}}_{\mathrm{C}}=\mathrm{mvh}$
$\therefore$ As v decreases $\therefore\left|\overrightarrow{\mathrm{L}}_{\mathrm{C}}\right|$ decreases

## 05. Ans: (b)

Sol: Total free expansion deformation

$$
\begin{aligned}
\delta & =\delta_{1}+\delta_{2} \\
& =\mathrm{L} \alpha \mathrm{t} \times 2
\end{aligned}
$$

Total free expansion strain $=\varepsilon_{1}+\varepsilon_{2}=2 \alpha t$
As the cross sectional area is constant

$$
\sigma_{1}=\sigma_{2}=\sigma
$$

Total restricted strain $=\frac{\sigma}{\mathrm{E}_{1}}+\frac{\sigma}{\mathrm{E}_{2}}$

Displacement compatibility:
Total free expansion strain $=$ Total restricted strain

$$
\begin{aligned}
& \Rightarrow \quad \frac{\sigma}{\mathrm{E}_{1}}+\frac{\sigma}{\mathrm{E}_{2}}=2 \alpha \mathrm{t} \\
& \\
& \quad \sigma=2 \alpha \mathrm{t}\left[\frac{\mathrm{E}_{1} \mathrm{E}_{2}}{\mathrm{E}_{1}+\mathrm{E}_{2}}\right] \\
& \therefore \quad \\
& \quad \sigma=2 \times \alpha \times 15 \times\left[\frac{2 \mathrm{E}_{2} \times \mathrm{E}_{2}}{2 \mathrm{E}_{2}+\mathrm{E}_{2}}\right] \\
& \\
& \\
& \\
&
\end{aligned}
$$

6. Ans: (b)

Sol: F.B.D. of man,

$$
\begin{array}{lc}
\mathrm{T}=\text { Tension in string } & \dagger^{\mathrm{T}} \\
\therefore \quad \mathrm{mg}-\mathrm{T}=\mathrm{ma} & \square \\
\Rightarrow \quad \mathrm{~T}=\mathrm{m}(\mathrm{~g}-\mathrm{a}) & \not \mathrm{mg}^{2}
\end{array}
$$

For rope to break,

$$
\begin{array}{rl} 
& \mathrm{T} \geq \eta \mathrm{mg} \\
& \mathrm{~m}(\mathrm{~g}-\mathrm{a}) \geq \eta \mathrm{mg} \\
\therefore a & \mathrm{a} \\
\mathrm{~g}(1-\eta) \\
\therefore \quad & a_{\max }=g(1-\eta)
\end{array}
$$

7. Ans: (c)

Sol: $\quad \sigma_{x}=P_{1}$,

$$
\begin{aligned}
& \sigma_{y}=P_{2}, \\
& \tau_{\mathrm{xy}}=\mathrm{q}
\end{aligned}
$$

Given both principal stresses have the opposite sign
$\sigma_{2}<0$

$$
\begin{aligned}
& \therefore \sigma_{2}<0 \Rightarrow \frac{\mathrm{P}_{1}+\mathrm{P}_{2}}{2}-\sqrt{\left(\frac{\mathrm{P}_{1}-\mathrm{P}_{2}}{2}\right)^{2}+\mathrm{q}^{2}}<0 \\
& \quad\left(\frac{\mathrm{P}_{1}+\mathrm{P}_{2}}{2}\right)^{2}<\left(\frac{\mathrm{P}_{1}-\mathrm{P}_{2}}{2}\right)^{2}+\mathrm{q}^{2} \\
& \Rightarrow \mathrm{P}_{1} \mathrm{P}_{2}<\mathrm{q}^{2}
\end{aligned}
$$

## 08. Ans: (c)

## Sol:

- In uniform circular motion velocity changes but speed is constant, hence statement 2 is wrong.
- Since speed changes so velocity will also change, hence statement 4 is also wrong.

## 09. Ans: (a)

Sol: $F_{D}=2 k N, \quad L_{D}=10^{9}$ rev,
$\mathrm{R}=0.90$

$$
\mathrm{C}_{10}=\mathrm{F}_{\mathrm{D}}\left(\frac{\mathrm{~L}_{\mathrm{D}}}{\mathrm{~L}_{\mathrm{R}}}\right)^{\frac{1}{3}}=2 \times\left(\frac{10^{9}}{10^{6}}\right)^{\frac{1}{3}}=20 \mathrm{kN}
$$

10. Ans: (c)

Sol: $\quad \varepsilon_{\theta}=\frac{2 \pi(\mathrm{r}+\mathrm{u})-2 \pi \mathrm{r}}{2 \pi \mathrm{r}}=\frac{\mathrm{u}}{\mathrm{r}}$
11. Ans: (b)

Sol: w.r.t observer on pulley, velocity of block B to the right is, " $v_{B}-u$ " and velocity of block $A$ is " $v_{A}$ ".
Since, string is inextensible.
$\therefore \mathrm{v}_{\mathrm{B}}-\mathrm{u}=\mathrm{v}_{\mathrm{A}}$ or $\mathrm{v}_{\mathrm{B}}=\mathrm{u}+\mathrm{v}_{\mathrm{A}}$

## 12. Ans: (d)

Sol: Given $\varepsilon_{\mathrm{x}}=\mathrm{kx}^{3}$ Where x is constant
We know that $\varepsilon_{\mathrm{x}}=\frac{\partial \mathrm{u}}{\partial \mathrm{x}}$
Where ' $u$ ' is the displacement in x - direction

$$
\therefore \frac{\partial \mathrm{u}}{\partial \mathrm{x}}=\frac{\mathrm{du}}{\mathrm{dx}}=\mathrm{kx}^{2} \Rightarrow \mathrm{du}=\mathrm{kx}^{3} . \mathrm{dx}
$$

$$
\mathrm{u}=\int_{0}^{\mathrm{L}} \mathrm{k} \cdot \mathrm{x}^{3} \cdot \mathrm{dx}=\frac{\mathrm{kL}^{4}}{4}
$$

## 13. Ans: (a)

Sol: $u_{y}=3 \mathrm{~m} / \mathrm{s}$

$$
\begin{aligned}
& \mathrm{a}_{\mathrm{z}}=-\mathrm{g}=-10 \mathrm{~m} / \mathrm{s}^{2} \\
& \mathrm{z}=\mathrm{u}_{\mathrm{z}} \mathrm{t}+\frac{1}{2} \mathrm{a}_{\mathrm{z}} \mathrm{t}^{2} \\
& 5=\frac{1}{2} \times 10 \times \mathrm{t}^{2} \quad \Rightarrow \mathrm{t}=1 \mathrm{sec} \\
& \mathrm{y}=\mathrm{u}_{\mathrm{y}} \mathrm{t}=3 \times 1=3 \mathrm{~m} ; \mathrm{x}=2 \mathrm{~m}
\end{aligned}
$$

## 14. Ans: (d)

Sol: Beam bents into the form of circular arc only when it is subjected to pure bending.

When a simply supported beam is subjected to pure bending,
Deflection at centre, $\delta=\frac{\mathrm{M} \ell^{2}}{8 \mathrm{EI}}=\frac{\ell^{2}}{8 \mathrm{R}}$

$$
\begin{aligned}
& {\left[\because \frac{1}{\mathrm{R}}=\frac{\mathrm{M}}{\mathrm{EI}}\right]} \\
& \Rightarrow \mathrm{d}=\frac{\ell^{2}}{8 \mathrm{R}}
\end{aligned}
$$

$\Rightarrow \mathrm{R}=\frac{\ell^{2}}{8 \mathrm{~d}}(\because \mathrm{~d} \ll \mathrm{R})$
$\frac{\sigma}{y}=\frac{E}{R} \Rightarrow \frac{\sigma}{E}=\frac{y}{R}$
$\therefore \operatorname{surfacestrain}(\mathrm{e})=\frac{\sigma}{\mathrm{E}}=\frac{\mathrm{y}}{\mathrm{R}}=\frac{\frac{\mathrm{t}}{2}}{\frac{\ell^{2}}{8 d}}=\frac{\mathrm{t} \times 8 \mathrm{~d}}{2 \times \ell^{2}}$

$$
\overline{8 \mathrm{~d}}
$$

$$
\therefore \mathrm{e}=\frac{4 \mathrm{td}}{\ell^{2}}
$$

15. Ans: (c)

Sol:

$$
\begin{aligned}
& \sigma_{\text {vonMises }}=\sqrt{\frac{\left(\sigma_{1}-\sigma_{2}\right)^{2}+\left(\sigma_{2}-\sigma_{3}\right)^{2}+\left(\sigma_{3}-\sigma_{1}\right)^{2}}{2}} \\
& \sqrt{\frac{(210-210)^{2}+(210-210)^{2}+(210-210)^{2}}{2}}=0 \\
& \sigma_{\text {vonMises }}=\frac{\mathrm{s}_{\mathrm{y}}}{\mathrm{FOS}} \\
& \text { FOS }=\frac{\mathrm{S}_{\mathrm{y}}}{\sigma_{\text {von Mises }}}=\frac{210}{0}=\infty
\end{aligned}
$$

## 16. Ans: (c)

Sol: $\vec{\tau}_{\text {ext }}=\frac{\mathrm{d}}{\mathrm{dt}}(\overrightarrow{\mathrm{L}})$
where, $\quad \vec{\tau}_{\text {ext }}=$ External torque

$$
\overrightarrow{\mathrm{L}}=\text { Angular momentum }
$$

Now, $\vec{\tau}_{\text {ext }}=0$
$\therefore \quad \overrightarrow{\mathrm{L}}=$ constant
17. Ans: (a)

Sol:

Angle of twist at D with respect to A

$$
\begin{aligned}
\theta_{\mathrm{AD}} & =\theta_{\mathrm{AB}}+\theta_{\mathrm{BC}}+\theta_{\mathrm{CD}} \\
& =\left(\frac{\mathrm{T} \ell}{\mathrm{GJ}}\right)_{\mathrm{AB}}+\left(\frac{\mathrm{T} \ell}{\mathrm{GJ}}\right)_{\mathrm{BC}}+\left(\frac{\mathrm{T} \ell}{\mathrm{GJ}}\right)_{\mathrm{CD}} \\
& =\frac{\left(\mathrm{t} \times \frac{\mathrm{L}}{3}\right) \times \frac{\mathrm{L}}{3}}{\mathrm{GJ}}+\frac{\left(\mathrm{t} \times \frac{\mathrm{L}}{3}\right) \times \frac{\mathrm{L}}{3}}{\mathrm{GJ}}+\frac{1}{\mathrm{GJ}} \int_{0}^{\frac{\mathrm{L}}{3}} \mathrm{t} \cdot \mathrm{xdx}
\end{aligned}
$$

$$
\theta_{\mathrm{AD}}=\theta_{\mathrm{D}}=\frac{2 \mathrm{t} \mathrm{~L}^{2}}{9 \mathrm{GJ}}+\frac{\mathrm{t} \times(\mathrm{L} / 3)^{2}}{2 \mathrm{GJ}}=\frac{\mathrm{tL}^{2}}{3.6 \mathrm{GJ}}
$$

18. Ans: (b)

Sol:

$$
\begin{aligned}
& \mathrm{I}_{\mathrm{AB}}=\mathrm{I}_{\mathrm{CD}}=\mathrm{m}\left(\frac{\ell}{2}\right)^{2} \\
& \mathrm{I}_{\mathrm{AD}}=\mathrm{I}_{\mathrm{BC}}=\frac{\mathrm{m} \ell^{2}}{12} \\
& \mathrm{I}_{\text {total }}=2 \mathrm{~m} \frac{\ell^{2}}{4}+\frac{2 \mathrm{~m} \ell^{2}}{12}=\frac{2}{3} \mathrm{~m} \ell^{2}
\end{aligned}
$$

19. Ans: (b)

Sol:

$$
\begin{aligned}
& \mathrm{T}_{\mathrm{A}}+\mathrm{T}_{\mathrm{B}}=\mathrm{T} \\
& \theta_{A B}=0 \Rightarrow \mathrm{~T} \times \frac{2 \mathrm{~L}}{5}=\mathrm{T}_{\mathrm{B}} \times \mathrm{L} \\
& \Rightarrow \mathrm{~T}_{\mathrm{B}}=\frac{2 \mathrm{~T}}{5} \\
& \mathrm{~T}_{\mathrm{A}}=\frac{3 \mathrm{~T}}{5}
\end{aligned}
$$

$\therefore \tau \alpha \mathrm{T} \Rightarrow$ Max. shear stress is at A

$$
\tau_{\mathrm{A}}=\frac{16 \mathrm{~T}_{\mathrm{A}}}{\pi \mathrm{~d}^{3}}=\frac{16}{\pi \mathrm{~d}^{3}} \times \frac{3 \mathrm{~T}}{5}=\frac{9.6 \mathrm{~T}}{\pi \mathrm{~d}^{3}}
$$

20. Ans: (c)

Sol: $\frac{\mathrm{mr}^{2}}{4}=\mathrm{mK}^{2}$
$\therefore \mathrm{K}=\frac{\mathrm{r}}{2}=\frac{4}{2}=2 \mathrm{~cm}$

## 21. Ans: (c)

Sol: $\frac{\mathrm{PL}^{3}}{48 \mathrm{EI}}$ is the deflection without the spring

$$
\begin{aligned}
\delta & =\frac{\mathrm{PL}^{3}}{48 \mathrm{EI}}-\frac{\mathrm{P}}{\mathrm{~K}} \\
& =\frac{\mathrm{PL}^{3}}{48 \mathrm{EI}}-\frac{\mathrm{PL}^{3}}{144 \mathrm{EI}} \\
& =\frac{\mathrm{PL}^{3}}{\mathrm{EI}}\left[\frac{3}{144}-\frac{1}{144}\right] \\
& =\frac{\mathrm{PL}^{3}}{\mathrm{EI}} \times \frac{2}{144} \\
& =\frac{\mathrm{PL}^{3}}{72 \mathrm{EI}}
\end{aligned}
$$

## 22. Ans: (b)

Sol:

Since height of centre of mass $=\frac{1}{2} \mathrm{~m}$ (from O)
So Potential energy $=\operatorname{mg} \times \frac{1}{2}$
Using conservation of mechanical energy

$$
\operatorname{mg} \times \frac{1}{2}=\frac{1}{2} \mathrm{I} \omega^{2}
$$

$\mathrm{I}=\frac{\mathrm{m} \times 1^{2}}{3}$, About O
Solving we get $\omega=5.4 \mathrm{rad} / \mathrm{s}$
23. Ans: (a)

Sol:

Center $\rightarrow(\psi, 0)$
Radius $\rightarrow \psi$

## 24. Ans: (a)

Sol: For a prismatic bar having weight 'W', maximum stress is given by,

$$
\sigma=\frac{\mathrm{W}}{\mathrm{~A}}=\frac{\rho \mathrm{Vg}}{\mathrm{~A}}=\rho \mathrm{Lg}
$$

here, $\quad \mathrm{V}=$ Volume of the bar $=\mathrm{A} \times \mathrm{L}$
A $=$ Cross-sectional area
$\mathrm{L}=$ Length of the bar
$\rho=$ Density of the bar
Given that, $\mathrm{L}^{\prime}=\mathrm{kL}$
$\rho=$ Material constant.
$\Rightarrow \sigma^{\prime}=\rho L^{\prime} \mathrm{g}$

$$
=\rho(\mathrm{kL}) \mathrm{g}
$$

$$
=\sigma \times \mathrm{k}
$$

$\Rightarrow \frac{\sigma^{\prime}}{\sigma}=\mathrm{k}$

## 25. Ans: (b)

Sol:

On smooth inclined surface mgsin $\theta$ acts along incline as shown in figure.

So, $\mathrm{V}_{\mathrm{c} . \mathrm{m}}$ increases . ' $\omega$ ' remains constant, since there is no torque .

So, $\mathrm{V}_{\mathrm{c} . \mathrm{m}} \neq \omega \mathrm{R}$
26. Ans: (d)

## Sol: Case 1

## Case 2

$\left(\ell_{e}\right)_{1}=\frac{\ell}{2}$ $\left(l_{\mathrm{e}}\right)_{2}=2 l$
$\mathrm{P}_{1}=4000 \mathrm{~N}$ $P_{2}=$ ?
$P=\frac{\pi^{2}}{\ell_{e}^{2}} E I_{\text {min }} \Rightarrow P \alpha \frac{1}{\left(\ell_{e}\right)^{2}}$
$\frac{P_{2}}{P_{1}}=\frac{\left(\ell_{e}\right)_{1}^{2}}{\left(\ell_{e}\right)_{2}^{2}}=\left(\frac{\ell}{2} \times \frac{1}{2 \ell}\right)^{2}=\frac{1}{16}$
$\frac{\left|P_{2}-P_{1}\right|}{P_{1}} \times 100=\frac{15}{16} \times 100=93.75 \%$

## 27. Ans: (a)

Sol: Initial situation (Before collision)

## Final situation (After collision)

By using conservation of linear momentum

$$
\begin{align*}
& 1 \times \mathrm{U}=-1 \times 2+5 \times \mathrm{V}  \tag{i}\\
& \mathrm{e}=1=\frac{\mathrm{V}+2}{\mathrm{U}} \ldots \ldots \ldots \ldots . . . . . . . . \tag{ii}
\end{align*}
$$

From (i) and (ii)

$$
\begin{aligned}
& \mathrm{V}=1 \mathrm{~m} / \mathrm{s} \\
& \mathrm{U}=3 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

Total momentum of system

$$
=1 \times 3=3 \mathrm{~kg} \mathrm{~m} / \mathrm{s}
$$

Momentum of 5 kg mass after collision

$$
=5 \times 1=5 \mathrm{~kg} \mathrm{~m} / \mathrm{s}
$$

Momentum of 1 kg mass after collision

$$
=1 \times 2=2 \mathrm{~kg} \mathrm{~m} / \mathrm{s} \text { (Towards left) }
$$

Kinetic energy of system

$$
\begin{aligned}
& =\frac{1}{2} \times 1 \times 2^{2}+\frac{1}{2} \times 5 \times 1^{2} \\
& =4.5 \mathrm{~J}
\end{aligned}
$$

# TEST YOUR PREP IN A REAL TEST ENVIRONMENT <br> Pre GAIJE - 2020 

## Date of Exam : $\mathbf{1 8}^{\text {th }}$ January 2020

 Last Date to Apply: 31 ${ }^{\text {st }}$ December 2019Highlights:

- Get real-time experience of GATE-20 test pattern and environment.
- Virtual calculator will be enabled.
- Post exam learning analytics and All India Rank will be provided.
- Post GATE guidance sessions by experts.
- Encouraging awards for CATE-20 toppers.

# SSC-JE (Paper-I) OOnline Test Series 

Staff Selection Commission - Junior Engineer

## No. of Tests : 20

Subject Wise Tests: 16| Mock Tests - 4
Civil| Electrical | Mechanical

## AVAILABLE NOW

All tests will be available till SSC 2019 Examination

## 28. Ans: (c)

Sol: When a member is subjected to uniaxial load then the normal stress acting on an inclined plane is

$\sigma_{\mathrm{n}}=\sigma_{\mathrm{x}} \sin ^{2} \theta$
$\therefore \frac{\sigma_{\mathrm{n} 2}}{\sigma_{\mathrm{n} 1}}=\frac{\left(\sin \theta_{2}\right)^{2}}{\left(\sin \theta_{1}\right)^{2}}=\frac{(\sin 120)^{2}}{(\sin 30)^{2}}=3$

## 29 Ans: (c)

Sol. In the horizontal direction, momentum must be conserved, as the floor is frictionless and there is no horizontal force.
$\therefore \mathrm{m} \times \mathrm{u} \times \sin \theta=\mathrm{m} \times \mathrm{v} \times \sin \phi$
In vertical direction, $\mathrm{e}=1=\frac{\mathrm{v} \cos \phi}{\mathrm{u} \cos \theta}$

$$
\begin{equation*}
\Rightarrow \mathrm{e} \mathrm{u} \cos \theta=\mathrm{v} \cos \phi \tag{ii}
\end{equation*}
$$

From (i) and (ii)

$$
v=u \sqrt{\sin ^{2} \theta+e^{2} \cos ^{2} \theta}
$$

## 30. Ans: (b)

Sol: We know that

$$
\begin{aligned}
& \sigma=\frac{\mathrm{P}}{\mathrm{~A}}=\varepsilon \times \mathrm{E} \\
& \mathrm{E}=3 \mathrm{~K}(1-2 \mu) \\
& \frac{\mathrm{P} \times 4}{\pi \mathrm{~d}^{2}}=\frac{\delta}{\mathrm{L}} \times 3 \mathrm{~K}(1-2 \mu)
\end{aligned}
$$

$$
\begin{aligned}
\mathrm{k} & =\frac{4 \mathrm{PL}}{3 \pi \mathrm{~d}^{2}(1-2 \mu)} \\
& =\frac{2 \mathrm{PL}}{1.5 \pi \mathrm{~d}^{2}(1-2 \mu)}
\end{aligned}
$$

## 31. Ans: (c)

Sol: Let $\mathrm{k}=$ force constant of the spring.
Potential energy of the spring after the first stretching $=\mathrm{E}_{1}=\frac{1}{2} \mathrm{kx}^{2}$.

Potential energy of the spring after the second stretching $=E_{2}=\frac{1}{2} k(2 x)^{2}$.

$$
\begin{aligned}
& \mathrm{W}_{1}=\mathrm{E}_{1}, \mathrm{~W}_{2}=\mathrm{E}_{2}-\mathrm{E}_{1}=3 \mathrm{E}_{1} \\
& \Rightarrow \quad \mathrm{~W}_{2}=3 \mathrm{~W}_{1}
\end{aligned}
$$

32. Ans: (b)

Sol: The compatibility condition for the strains

$$
\frac{\partial^{2} \varepsilon_{x}}{\partial y^{2}}+\frac{\partial^{2} \varepsilon_{y}}{\partial x^{2}}=\frac{\partial^{2}\left(\gamma_{x y}\right)}{\partial x \partial y}
$$

Given $\varepsilon_{\mathrm{x}}=\mathrm{py}^{2}+8 \mathrm{x}^{2}$

$$
\begin{aligned}
& \frac{\partial \varepsilon_{\mathrm{x}}}{\partial \mathrm{y}}=2 \mathrm{py}, \quad \frac{\partial^{2} \varepsilon_{\mathrm{x}}}{\partial \mathrm{y}^{2}}=2 \mathrm{p} \\
& \varepsilon_{\mathrm{y}}=10 \mathrm{xy}+4 \mathrm{y}^{2} \\
& \frac{\partial \varepsilon_{\mathrm{y}}}{\partial \mathrm{x}}=10 \mathrm{y} \\
& \frac{\partial^{2} \varepsilon_{\mathrm{y}}}{\partial \mathrm{x}^{2}}=0 \\
& \gamma_{\mathrm{xy}}=4\left(\mathrm{x}^{2}+\mathrm{xy}\right) \\
& \frac{\partial \gamma_{\mathrm{xy}}}{\partial \mathrm{x}}=4(2 \mathrm{x}+\mathrm{y})
\end{aligned}
$$

$$
\frac{\partial^{2} \gamma_{x y}}{\partial y \partial x}=4
$$

$$
2 p+0=4 \Rightarrow p=2
$$

## 33. Ans: (d)

Sol: Consider total upward and downward motion at a time.

Let t be the total time taken by ball.
By using equation of motion,
$y=u_{y} t+\frac{1}{2} a_{y} t^{2}$
$0=\mathrm{u}_{\mathrm{y}} \mathrm{t}-\frac{1}{2} \mathrm{gt}^{2}$
$\Rightarrow \mathrm{t}=\frac{2 \mathrm{u}_{\mathrm{y}}}{\mathrm{g}}$

Considering only upward motion
$v_{y}=u_{y}+a_{y} t$
$0=\mathrm{u}_{\mathrm{y}}-10 \times 40$
$\Rightarrow \mathrm{u}_{\mathrm{y}}=400 \mathrm{~m} / \mathrm{s}$
From (i) and (ii)
$\mathrm{t}=\frac{2 \times 400}{10}=80 \mathrm{sec}$
$\therefore$ Time for downward journey $=80-40$

$$
=40 \mathrm{sec}
$$

## 34. Ans: (d)

Sol: $\quad \sigma_{\text {impact }}=\sigma_{\text {st }}\left(1+\sqrt{1+\frac{2 \mathrm{~h}}{\delta_{\mathrm{st}}}}\right)$

$$
\begin{aligned}
& 20=\frac{1000}{6000}\left(1+\sqrt{\frac{2 \mathrm{~h}}{\delta_{\mathrm{st}}}}\right) \\
& (121)^{2}=\frac{2 \mathrm{~h}}{\delta_{\mathrm{st}}} \\
& 14642=\frac{2 \mathrm{~h}}{\delta_{\mathrm{st}}} \\
& \mathrm{~h}=7321 \times \frac{1000 \times 6000}{6000 \times 10 \times 10^{3}}=732.1 \mathrm{~mm}
\end{aligned}
$$

## 35. Ans: (d)

Sol: Taking anticlockwise as positive,
$\mathrm{T}_{\mathrm{A}}=-100 \mathrm{kNm}, \omega_{\mathrm{A}}=50 \mathrm{rpm}$,
$\omega_{\mathrm{C}}=-200 \mathrm{rpm}$
$\mathrm{T}_{\mathrm{A}}+\mathrm{T}_{\mathrm{B}}+\mathrm{T}_{\mathrm{C}}=0$
Assuming no power loss,
$\mathrm{T}_{\mathrm{A}} \omega_{\mathrm{A}}+\mathrm{T}_{\mathrm{C}} \omega_{\mathrm{C}}=0$
$\Rightarrow-100 \times 50+\mathrm{T}_{\mathrm{C}} \times(-200)=0$
$\mathrm{T}_{\mathrm{C}}=\frac{-100 \times 50}{200}=-25$
or 25 kNm clockwise
$\therefore-100+\mathrm{T}_{\mathrm{B}}-25=0$
$\mathrm{T}_{\mathrm{B}}=125 \mathrm{kNm}$ anticlockwise
36. Ans: (d)

Sol:

$$
\begin{aligned}
& \text { Elongation, } \delta=2 \times \int_{0}^{\ell / 2} \frac{\mathrm{P}_{\mathrm{r}} \mathrm{dr}}{\mathrm{EA}} \\
& \mathrm{P}_{\mathrm{r}}=\mathrm{m}_{\mathrm{r}} \mathrm{r} \omega^{2}=\rho \mathrm{A}\left(\frac{\ell}{2}-\mathrm{r}\right) \mathrm{r} \omega^{2} \\
& \delta=2 \times \int_{0}^{\ell / 2} \frac{\mathrm{P}_{\mathrm{r}} \mathrm{dr}}{\mathrm{EA}} \\
& \delta=\frac{2 \rho \omega^{2}}{\mathrm{E}} \int_{0}^{\ell / 2}\left(\frac{\ell}{2} \mathrm{r}-\mathrm{r}^{2}\right) \mathrm{dr} \\
& \delta
\end{aligned}
$$

## 37. Ans: (d)

Sol: For a Hook's joint angular speed ratio is given by

$$
\begin{aligned}
& \frac{\omega_{2}}{\omega_{1}}=\frac{\cos \alpha}{1-\sin ^{2} \alpha \cos ^{2} \theta} \\
& \frac{\omega_{2}}{\omega_{1}} \text { is minimum when } 1-\sin ^{2} \alpha \cos ^{2} \theta \text { is }
\end{aligned}
$$

maximum i.e. $\theta=90^{\circ}$ and $270^{\circ}$.

## 38. Ans: (c)

Sol: $\sigma_{1}=\sigma_{h}=\frac{\operatorname{Pr}}{t}$

$$
\sigma_{2}=\sigma_{\ell}=\frac{\mathrm{Pr}}{2 \mathrm{t}}-\frac{\mathrm{F}}{2 \pi \mathrm{rt}}
$$

For pure shear, $\sigma_{1}=-\sigma_{2}$

$$
\frac{\operatorname{Pr}}{\mathrm{t}}=-\left(\frac{\mathrm{Pr}}{2 \mathrm{t}}-\frac{\mathrm{F}}{2 \pi \mathrm{rt}}\right)
$$

$$
\begin{aligned}
& \frac{\mathrm{F}}{2 \pi \mathrm{rt}}=\frac{3 \operatorname{Pr}}{2 \mathrm{t}} \\
& \Rightarrow \mathrm{~F}=3 \pi \mathrm{Pr}^{2}
\end{aligned}
$$

## 39. Ans: (b)

Sol: $3 \ddot{\mathrm{x}}+10 \dot{\mathrm{x}}+27 \mathrm{x}=0$

$$
\begin{aligned}
& \omega_{\mathrm{n}}=\sqrt{\frac{27}{3}}=3, \mathrm{c}=10, \mathrm{~m}=3 \\
& \xi=\frac{\mathrm{c}}{2 \mathrm{~m} \omega_{\mathrm{n}}}=\frac{10}{2 \times 3 \times 3}=\frac{10}{18}=\frac{5}{9}=0.556
\end{aligned}
$$

40. Ans: (b)

Sol: Strain energy, $U=\frac{T^{2} L}{2 G J}$
But, $T=\frac{\tau J}{\mathrm{R}}$

$$
\begin{aligned}
U & =\left(\frac{\tau J}{R}\right)^{2} \frac{L}{2 G J} \\
& =\frac{\tau^{2} J}{R^{2}} \times \frac{L}{2 G}=\frac{\tau^{2}\left(\frac{\pi}{2} R^{4}\right) L}{2 R^{2} G} \\
& =\frac{\tau^{2} \times \pi R^{2} \times L}{4 G} \\
U & =\frac{\tau^{2} A L}{4 G}
\end{aligned}
$$

So, $K=4$

## 41. Ans: (c)

Sol: For an isochronous governor radius of rotation is same irrespective of speed.

## 42. Ans: (d)

Sol: At a distance x from the free end

$$
\begin{aligned}
& \mathrm{M}_{\mathrm{x}}=\left(\frac{1}{2} \frac{\mathrm{wx}}{\ell} \times \mathrm{x}\right) \frac{\mathrm{x}}{3}=\frac{\mathrm{wx} \mathrm{x}^{3}}{6 \ell} \\
& \mathrm{Z}_{\mathrm{x}}=\frac{\mathrm{b}_{\mathrm{x}} \mathrm{~d}^{2}}{6} \\
& \sigma_{\mathrm{x}}=\frac{\mathrm{M}_{\mathrm{x}}}{\mathrm{Z}_{\mathrm{x}}}=\frac{\mathrm{w} \mathrm{x}}{\ell \times \mathrm{b}_{\mathrm{x}} \times \mathrm{d}^{2}}
\end{aligned}
$$

Maximum bending stress

$$
\sigma_{\max }=\frac{\mathrm{wL}^{2}}{\mathrm{bd}^{2}}
$$

To have the same maximum stress at all sections

$$
\begin{gathered}
\sigma_{\mathrm{x}}=\sigma_{\max } \\
\frac{\mathrm{wx}}{\ell \mathrm{~b}_{\mathrm{x}} \mathrm{~d}^{2}}=\frac{\mathrm{w} \mathrm{~L}^{2}}{\mathrm{bd}^{2}} \\
\mathrm{~b}_{\mathrm{x}}=\mathrm{b} \frac{\mathrm{x}^{3}}{\mathrm{~L}^{3}} \\
\mathrm{~b}_{\mathrm{x}} \propto \mathrm{x}^{3}
\end{gathered}
$$

The breadth is proportional to $x^{3}$
43. Ans: (b)

Sol: The resultant acceleration of block centre will become zero, when below conditions are satisfied:
(i) The tangential acceleration of link is equal and opposite of Coriolis acceleration.
(ii) The radial acceleration of link and acceleration of slider is equal and opposite.
44. Ans: (c)

Sol: For no tensile stress in the cross section

$$
\frac{\mathrm{P}}{\mathrm{~A}}-\frac{\mathrm{Pe}}{\mathrm{Z}} \geq 0
$$

Maximum eccentricity for no tensile stress condition,

$$
\begin{aligned}
& \frac{P}{A}-\frac{P e_{\max }}{Z}=0 \\
& \frac{P e}{Z}=\frac{P}{A} \\
& e_{\max }=\frac{Z}{A}=\frac{\frac{\pi}{32} d^{3}}{\frac{\pi}{4} d^{2}} \\
& e_{\max }=\frac{d}{8}
\end{aligned}
$$

## 45. Ans: (c)

Sol: The equation of motion is
$m \ddot{\mathrm{x}} \mathrm{R}+\frac{\mathrm{MR}^{2}}{2} \ddot{\theta}+\mathrm{ka}^{2} \theta=0 \quad(\quad$ Take moment about O )
$x=R \theta$
$\ddot{\mathrm{x}}=\mathrm{R} \ddot{\theta}$
$\Rightarrow \mathrm{mR}^{2} \ddot{\theta}+\frac{\mathrm{MR}^{2} \ddot{\theta}}{2}+\mathrm{ka}^{2} \theta=0$

$$
\begin{aligned}
\omega_{\mathrm{n}} & =\sqrt{\frac{\mathrm{k}_{\mathrm{eq}}}{\mathrm{~m}_{\mathrm{eq}}}}=\sqrt{\frac{\mathrm{ka}^{2}}{\mathrm{mR}^{2}+\frac{\mathrm{MR}^{2}}{2}}} \\
& =\sqrt{\frac{100 \times 0.1^{2}}{0.5 \times 0.2^{2}+\frac{1 \times 0.2^{2}}{2}}}=5 \mathrm{rad} / \mathrm{sec} \\
\Rightarrow \mathrm{f} & =\frac{5}{2 \pi}=0.8 \mathrm{~Hz}
\end{aligned}
$$

46. Ans: (d)

Sol: Due to symmetric loading, shear force at centre of simply supported beam is zero.

## 47. Ans (a)

Sol: $\omega=$ angular velocity,

$$
\frac{2 \pi \mathrm{~N}}{60}=\frac{2 \pi \times 1200}{60}=125.66 \mathrm{rad} / \mathrm{s}
$$

Maximum velocity during the follower rise with SHM:

$$
\begin{aligned}
\mathrm{v}_{\max } & =\frac{\mathrm{h}}{2} \times \frac{\pi \omega}{\beta_{1}} \\
& =\frac{25}{2 \times 1000} \times \frac{\pi \times 125.66}{120^{\circ} \times \pi / 180}=2.35 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

48. Ans: (b)

## Sol:

Shear stress at $1 / 4^{\text {th }}$ beam depth $=120 \mathrm{MPa}$

$$
\begin{gathered}
\tau=\frac{\mathrm{VA} \mathrm{\bar{y}}}{\mathrm{Ib}} \\
120=\frac{\mathrm{V} \times \mathrm{b} \times \frac{\mathrm{d}}{4} \times\left(\frac{\mathrm{d}}{4}+\frac{\mathrm{d}}{8}\right)}{\frac{\mathrm{bd}^{3}}{12} \times \mathrm{b}} \\
120=\frac{\mathrm{V}}{\mathrm{bd}}\left(\frac{9}{8}\right) \\
\tau_{\text {avg }}=\frac{\mathrm{V}}{\mathrm{bd}}=\left(\frac{120 \times 8}{9}\right)=106.67 \mathrm{mPa} \\
\therefore \tau_{\max }=\frac{3}{2}(106.67)=160 \mathrm{MPa}
\end{gathered}
$$

49. Ans (b)

Sol: Balancing of several masses in different planes can be done by 2 masses in 2 planes on either side of reference planes. Hammer blow in the locomotive engine occurs due to unbalanced force perpendicular to line of stroke.

## For Four cylinders :

Secondary reverse crank

So secondary force is completely balanced for four cylinder radial engines.

## 50. Ans: (c)

Sol: If braking force required is zero, it is called self locking brake but the shoe brake behaves as self locking brake only when it is self energising.

## 51. Ans (a)

Sol: If angular velocity of link AB in clockwise direction then angular velocity of coupler is in anti-clockwise direction.
$\therefore$ Velocity of rubbing at pin

$$
\begin{aligned}
& =\mathrm{r}_{\mathrm{pin}} \times\left(\omega_{\mathrm{AB}}+\omega_{\mathrm{BC}}\right) \\
& =20 \times 10^{-3} \times(16+6)=0.44 \mathrm{~m} / \mathrm{s}
\end{aligned}
$$

52. Ans: (c)

Sol: $\quad \mathrm{I}=\mathrm{mk}^{2}=500 \times 0.3^{2}=45 \mathrm{~kg}-\mathrm{m}^{2}$

$$
\begin{aligned}
& \mathrm{T}=900 \mathrm{Nm}=\mathrm{I} \alpha \Rightarrow \alpha=\frac{\mathrm{T}}{\mathrm{I}} \\
& \alpha=20 \mathrm{rad} / \mathrm{s}^{2} ; \omega_{\mathrm{i}}=0 ; \mathrm{t}=10 \mathrm{~s} \\
& \omega_{\mathrm{f}}=\omega_{\mathrm{i}}+\alpha \mathrm{t}=200 \mathrm{rad} / \mathrm{s}
\end{aligned}
$$

$$
\begin{aligned}
\mathrm{KE}=\frac{1}{2} \mathrm{I} \omega_{\mathrm{f}}^{2} & =\frac{1}{2} \times 45 \times 200^{2} \\
& =900 \mathrm{~kJ}
\end{aligned}
$$

53. Ans. (c)

Sol: The necessary condition for placing two masses such that the system becomes dynamically equivalent is

$$
\begin{aligned}
& \ell_{1} \times \ell_{2}=\mathrm{k}_{\mathrm{g}}^{2} \\
& 20 \times 45=\mathrm{kg}^{2}
\end{aligned}
$$

Substituting respective values, we get $\mathrm{k}_{\mathrm{g}}=30 \mathrm{~mm}$
54. Ans: (b)

Sol: For anticlockwise rotation, side A is tight side and side B is slack
$\frac{\mathrm{T}_{1}}{\mathrm{~T}_{2}}=1.5$
$\mathrm{T}_{1}+\mathrm{T}_{2}=500$
Take moment about paint O
$\mathrm{P} \times \mathrm{L}=\mathrm{T}_{1} \mathrm{~b}-\mathrm{T}_{2} \mathrm{a}$, Where L is distance between applied load and point O .
For self locking,
P.L $\leq 0$
$\mathrm{T}_{1} \mathrm{~b}-\mathrm{T}_{2} \mathrm{a} \leq 0$
$\frac{\mathrm{b}}{\mathrm{a}} \leq \frac{\mathrm{T}_{2}}{\mathrm{~T}_{1}}$
$\frac{\mathrm{a}}{\mathrm{b}}=\frac{3}{2}$

## 55. Ans: (a)

Sol: The spin axis and precession axis are parallel (both are vertical) hence there is no gyroscopic effect
56. Ans: (d)

Sol: Bending due to weight of gear.
Torsion due to tangential load (power transmission)

$$
T=\frac{60 \mathrm{P}}{2 \pi \mathrm{~N}}
$$

57. Ans: (b)

Sol: $X_{\text {static }}=\frac{\mathrm{F}_{0}}{\mathrm{k}}=\frac{250}{10 \times 10^{3}}=25 \mathrm{~mm}$

$$
\begin{aligned}
& \text { At resonance } \frac{X}{\mathrm{X}_{\text {static }}}=\frac{1}{2 \xi} \\
& \Rightarrow \frac{50}{25}=\frac{1}{2 \xi} \Rightarrow \xi=0.25 \\
& \omega_{\mathrm{n}}=\sqrt{\frac{\mathrm{k}}{\mathrm{~m}}}=\sqrt{\frac{10 \times 10^{3}}{1}}=100 \mathrm{rad} / \mathrm{sec} \\
& \mathrm{C}=2 \xi \mathrm{~m} \omega_{\mathrm{n}}=2 \times 0.25 \times 1 \times 100=50 \mathrm{~N}-\mathrm{s} / \mathrm{m}
\end{aligned}
$$

58. Ans: (a)

Sol: For bolt of uniform strength,

$$
\begin{aligned}
& (\mathrm{A})_{\text {shank }}=(\mathrm{A})_{\text {threaded }} \\
& \frac{\pi}{4}\left(\mathrm{~d}^{2}-\mathrm{d}_{\mathrm{h}}^{2}\right)=\frac{\pi}{4} \mathrm{~d}_{\mathrm{c}}^{2} \\
& \mathrm{~d}_{\mathrm{h}}=\sqrt{\mathrm{d}^{2}-\mathrm{d}_{\mathrm{c}}^{2}} \\
& \mathrm{~d}_{\mathrm{c}}=0.80 \mathrm{~d}
\end{aligned}
$$

$$
\begin{aligned}
\mathrm{d}_{\mathrm{h}} & =\sqrt{(10)^{2}-(0.80 \times 10)^{2}} \\
\mathrm{~d}_{\mathrm{h}} & =6 \mathrm{~mm}, \mathrm{r}_{\mathrm{h}}=\mathrm{d}_{\mathrm{h}} / 2=3 \mathrm{~mm}
\end{aligned}
$$

59. Ans: (c)

Sol: In Involute gear profile pressure angle is constant at each point of contact. In Cycloidal gear variation of centre distance is not permitted otherwise it will affect the velocity ratio.
The relative velocity of sliding when two gears are in mesh $=\left(\omega_{1}+\omega_{2}\right) \times \mathrm{PC}$

At pitch point path of contact $=0$
$\therefore \quad$ The velocity of sliding is zero at the pitch point.
60. Ans: (b)

Sol: K = 102.4 N/mm
$\mathrm{G}=100 \mathrm{GPa}, \quad \mathrm{n}=8$
We know that, $K=\frac{G d^{4}}{8 D^{3} n}$
$\mathrm{D}=100 \mathrm{~mm}$,
$102.4=\frac{100 \times 10^{3} \times \mathrm{d}^{4}}{8 \times 100^{3} \times 8}$
$\mathrm{d}=16 \mathrm{~mm}$
$C=\frac{D}{d}=\frac{100}{16}=$ Spring Index
$\mathrm{K}_{\mathrm{s}}=1+\frac{1}{2 \mathrm{C}}=1+\frac{1}{2 \times 100 / 16}$
$\therefore \mathrm{K}_{\mathrm{s}}=1.08$

61. Ans: (c)

Sol: $\quad$ TR $>1$ for

$$
0<\frac{\omega}{\omega_{\mathrm{n}}}<\sqrt{2}
$$

$\mathrm{TR}=1$ for $\quad \frac{\omega}{\omega_{\mathrm{n}}}=\sqrt{2}$
$\mathrm{TR}<1$ for $\quad \frac{\omega}{\omega_{\mathrm{n}}}>\sqrt{2}$
62. Ans: (a)

Sol: At high speed, it becomes necessary to consider the dynamic load resulting from the impact between the mating teeth. The dynamic force induced due to following factors.

- Inaccuracies in tooth profile
- Error in tooth spacing
- Misalignment between gears
- Elasticity of parts
- Inertia of rotating disc

63. Ans: (c)

Sol: Diameter of base circle is more than diameter dedendum circle interference doesn't occur. Because involute portion will not come in contact with non involute portion

$$
\begin{aligned}
\xi & =1-\frac{\mathrm{h}_{\mathrm{o}}}{\mathrm{c}_{\mathrm{r}}} \\
\mathrm{~h}_{0} & =0.05 \mathrm{~mm}
\end{aligned}
$$

65. Ans: (c)

Sol: The controlling force equation is given as
$\mathrm{F}=\mathrm{ar}+\mathrm{b}$
$1600=a \times 400+b$ $\qquad$
$800=\mathrm{a} \times 240+\mathrm{b}$ $\qquad$
By solving these equations
$\mathrm{a}=5, \mathrm{~b}=-400$
To make the governor isochronous, the controlling force line must pass through the origin. So, the initial tension is $=400$
66. Ans: (c)

Sol: $\mathrm{r}_{1}=150 \mathrm{~mm}, \mathrm{r}_{2}=100 \mathrm{~mm}$,
$\mathrm{W}=1 \mathrm{kN}, \quad \mu=0.5, \mathrm{~T}=$ ?
$\mathrm{T}=\mu \mathrm{W} \mathrm{r}_{\mathrm{m}}=0.5 \times 1 \mathrm{kN} \times\left(\frac{0.150+0.1}{2}\right)=62.5$
N -m
67. Ans (d)

Sol:

- For stability of governor, slope of controlling force curve should be more than slope of straight line representing centripetal force passing through origin at point of intersection. The condition for stability is given by

$$
\therefore \frac{\mathrm{dF}}{\mathrm{dr}}>\mathrm{m} \omega^{2}
$$

When load on prime mover drops, the speed of centrifugal governor would increase and sleeve moves to top-most position. This closes the throttle valve and reduces fuel supply.

- The condition for the stability of governor is that the slope of the curve for the controlling force should be more than that of the line representing centripetal force at the speed considered. Therefore, if a centrifugal governor is stable at a particular position, it would be stable at all other position only if the condition of stability is satisfied.

## 68. Ans: (b)

Sol: Bearing modulus $(\mathrm{K})=950$
Bearing characteristic number $=\frac{\mathrm{ZN}}{\mathrm{P}}$
Where, $\mathrm{Z}=$ viscosity, $\mathrm{N}=$ speed $(\mathrm{rpm})$,

$$
\mathrm{P}=\text { pressure }
$$

From the data given in the problem,

$$
\frac{\mathrm{ZN}}{\mathrm{P}}>4 \mathrm{~K}
$$

It means bearing is operating in thick film zone as shown in above figure.
69. Ans: (d)

Sol: $\mathrm{h}=$ total rise;
$\phi_{\mathrm{a}}=$ angle of ascent
$\theta=$ cam rotation angle;
$\omega=$ cam rotation speed
Displacement, $\mathrm{D}=\frac{\mathrm{h}}{2 \pi}\left(\frac{2 \pi \theta}{\phi_{\mathrm{a}}}-\sin \left(\frac{2 \pi \theta}{\phi_{\mathrm{a}}}\right)\right) ;$
Velocity, $\mathrm{V}=\frac{\mathrm{h} \omega}{\phi_{\mathrm{a}}}\left(1-\cos \left(\frac{2 \pi \theta}{\phi_{\mathrm{a}}}\right)\right)$
Acceleration, $\mathrm{A}=\frac{2 \pi \mathrm{gh} \omega^{2}}{\phi_{\mathrm{a}}^{2}} \sin \left(\frac{2 \pi \theta}{\phi_{\mathrm{a}}}\right) ;$
Jerk, $\mathrm{J}=\frac{4 \pi^{2} \mathrm{~h} \omega^{3}}{\phi_{\mathrm{a}}^{3}} \cos \left(\frac{2 \pi \theta}{\phi_{\mathrm{a}}}\right)$

## 70. Ans: (d)

Sol: According to flexural formula,

$$
\frac{\sigma_{b}}{y}=\frac{M}{I}=\frac{E}{R} \Rightarrow \sigma_{b}=\frac{M}{I} y
$$

- For a given bending moment (M) maximum bending stress developed will be the same as bending stress developed for a given bending moment is independent of material properties. However, the maximum bending
moment taken by aluminium beam at failure is less, as the maximum stress taken by aluminium beam is lesser. Hence, statement (I) is incorrect.
- Thus, bending stress does not depend on Young's modulus of the material. Hence, statement (II) is correct.

## 71. Ans: (b)

Sol: In 4-stroke , 4 cylinder inline engines what ever may be the firing order primary forces are always balanced. Primary couple depends on firing order.

## 72. Ans: (a)

Sol: The Young's modulus which is represented by the slope of the stress-strain curve in its linear portion is the same in tension and compression.

Thus, according to Hook's law,
$\Rightarrow \sigma=\mathrm{E} \varepsilon$
$\Rightarrow \varepsilon=\frac{\sigma}{\mathrm{E}} \Rightarrow \varepsilon \propto \sigma$
Hence, both the statements are correct and statement (II) is the correct explanation of statement (I).

## 73. Ans: (b)

Sol: $x=\operatorname{asin} \omega t$ and $v=\frac{d x}{d t}=a \omega \cos \omega t$. It is clear that phase difference between ' $x$ ' and ' $v$ ' is $\pi / 2$.

## 74. Ans: (d)

Sol: Bending moment at that section along the length of beam when subjected to lateral loading is the sum of complete area of shear force diagram either to the right or left upto that section and concentrated moments upto that section.

Bending moment $=$ (Area of shear force diagram $)+($ sum of concentrated moments $)$

## 75. Ans: (d)

Sol: At rest the position of journal inside bearing is shown below.

At low speed, there is metal to metal contact and due to this frictional force is very high which shifts the journal towards left.

where, $\mathrm{f}=$ Friction force, $\mathrm{W}=$ Load
Wedging action are dominant at high speed and move the journal toward right.

Thus, the statement (I) is correct and statement (II) is incorrect.
