

**General Aptitude (GA)****Q.1 – Q.5 Carry ONE mark Each**

Q.1	We reached the station late, and _____ missed the train.
(A)	near
(B)	nearly
(C)	utterly
(D)	mostly
Q.2	Kind : _____ : : Often : Frequently (By word meaning)
(A)	Mean
(B)	Type
(C)	Cruel
(D)	Kindly

Q.3	A series of natural numbers $F_1, F_2, F_3, F_4, F_5, F_6, F_7, \dots$ obeys $F_{n+1} = F_n + F_{n-1}$ for all integers $n \geq 2$ . If $F_6 = 37$ , and $F_7 = 60$ , then what is $F_1$ ?
(A)	4
(B)	5
(C)	8
(D)	9

Q.4	<p>A survey for a certain year found that 90% of pregnant women received medical care at least once before giving birth. Of these women, 60% received medical care from doctors, while 40% received medical care from other healthcare providers.</p> <p>Given this information, which one of the following statements can be inferred with <i>certainty</i>?</p>
(A)	More than half of the pregnant women received medical care at least once from a doctor.
(B)	Less than half of the pregnant women received medical care at least once from a doctor.
(C)	More than half of the pregnant women received medical care at most once from a doctor.
(D)	Less than half of the pregnant women received medical care at most once from a doctor.
Q.5	<p>Looking at the surface of a smooth 3-dimensional object from the outside, which one of the following options is TRUE?</p>
(A)	The surface of the object must be concave everywhere.
(B)	The surface of the object must be convex everywhere.
(C)	The surface of the object may be concave in some places and convex in other places.
(D)	The object can have edges, but no corners.

## Q.6 – Q.10 Carry TWO marks Each

Q.6	<p>The country of Zombieland is in distress since more than 75% of its working population is suffering from serious health issues. Studies conducted by competent health experts concluded that a complete lack of physical exercise among its working population was one of the leading causes of their health issues. As one of the measures to address the problem, the Government of Zombieland has decided to provide monetary incentives to those who ride bicycles to work.</p> <p>Based only on the information provided above, which one of the following statements can be logically inferred with <i>certainty</i>?</p>
(A)	All the working population of Zombieland will henceforth ride bicycles to work.
(B)	Riding bicycles will ensure that all of the working population of Zombieland is free of health issues.
(C)	The health experts suggested to the Government of Zombieland to declare riding bicycles as mandatory.
(D)	The Government of Zombieland believes that riding bicycles is a form of physical exercise.

<p>Q.7</p>	<p>Consider two functions of time (<math>t</math>),</p> $f(t) = 0.01 t^2$ $g(t) = 4 t$ <p>where <math>0 &lt; t &lt; \infty</math>.</p> <p>Now consider the following two statements:</p> <p>(i) For some <math>t &gt; 0</math>, <math>g(t) &gt; f(t)</math>.</p> <p>(ii) There exists a <math>T</math>, such that <math>f(t) &gt; g(t)</math> for all <math>t &gt; T</math>.</p> <p>Which one of the following options is TRUE?</p>
(A)	only (i) is correct
(B)	only (ii) is correct
(C)	both (i) and (ii) are correct
(D)	neither (i) nor (ii) is correct

Q.8	<p>Which one of the following sentence sequences creates a coherent narrative?</p> <ul style="list-style-type: none"> <li>(i) Once on the terrace, on her way to her small room in the corner, she notices the man right away.</li> <li>(ii) She begins to pant by the time she has climbed all the stairs.</li> <li>(iii) Mina has bought vegetables and rice at the market, so her bags are heavy.</li> <li>(iv) He was leaning against the parapet, watching the traffic below.</li> </ul>
(A)	(i), (ii), (iv), (iii)
(B)	(ii), (iii), (i), (iv)
(C)	(iv), (ii), (i), (iii)
(D)	(iii), (ii), (i), (iv)
Q.9	<p><math>f(x)</math> and <math>g(y)</math> are functions of <math>x</math> and <math>y</math>, respectively, and <math>f(x) = g(y)</math> for all real values of <math>x</math> and <math>y</math>. Which one of the following options is <i>necessarily</i> TRUE for all <math>x</math> and <math>y</math>?</p>
(A)	$f(x) = 0$ and $g(y) = 0$
(B)	$f(x) = g(y) = \text{constant}$
(C)	$f(x) \neq \text{constant}$ and $g(y) \neq \text{constant}$
(D)	$f(x) + g(y) = f(x) - g(y)$

Q.10	Which one of the options best describes the transformation of the 2-dimensional figure <b>P</b> to <b>Q</b> , and then to <b>R</b> , as shown?
	
(A)	<p><i>Operation 1:</i> A clockwise rotation by <math>90^\circ</math> about an axis perpendicular to the plane of the figure</p> <p><i>Operation 2:</i> A reflection along a horizontal line</p>
(B)	<p><i>Operation 1:</i> A counter clockwise rotation by <math>90^\circ</math> about an axis perpendicular to the plane of the figure</p> <p><i>Operation 2:</i> A reflection along a horizontal line</p>
(C)	<p><i>Operation 1:</i> A clockwise rotation by <math>90^\circ</math> about an axis perpendicular to the plane of the figure</p> <p><i>Operation 2:</i> A reflection along a vertical line</p>
(D)	<p><i>Operation 1:</i> A counter clockwise rotation by <math>180^\circ</math> about an axis perpendicular to the plane of the figure</p> <p><i>Operation 2:</i> A reflection along a vertical line</p>

GATE 2023 Computer Science and Information Technology (CS)

Q.1 – Q.25 Carry ONE mark each.

Q.1	<p>Consider the following statements regarding the front-end and back-end of a compiler.</p> <p><b>S1:</b> The front-end includes phases that are independent of the target hardware.</p> <p><b>S2:</b> The back-end includes phases that are specific to the target hardware.</p> <p><b>S3:</b> The back-end includes phases that are specific to the programming language used in the source code.</p> <p>Identify the CORRECT option.</p>
(A)	Only <b>S1</b> is TRUE.
(B)	Only <b>S1</b> and <b>S2</b> are TRUE.
(C)	<b>S1</b> , <b>S2</b> , and <b>S3</b> are all TRUE.
(D)	Only <b>S1</b> and <b>S3</b> are TRUE.

**GATE 2023 Computer Science and Information Technology (CS)**

Q.2	Which one of the following sequences when stored in an array at locations $A[1], \dots, A[10]$ forms a max-heap?
(A)	23, 17, 10, 6, 13, 14, 1, 5, 7, 12
(B)	23, 17, 14, 7, 13, 10, 1, 5, 6, 12
(C)	23, 17, 14, 6, 13, 10, 1, 5, 7, 15
(D)	23, 14, 17, 1, 10, 13, 16, 12, 7, 5

GATE 2023 Computer Science and Information Technology (CS)

Q.3	<p>Let <code>SLLdel</code> be a function that deletes a node in a singly-linked list given a pointer to the node and a pointer to the head of the list. Similarly, let <code>DLLdel</code> be another function that deletes a node in a doubly-linked list given a pointer to the node and a pointer to the head of the list.</p> <p>Let <math>n</math> denote the number of nodes in each of the linked lists. Which one of the following choices is TRUE about the worst-case time complexity of <code>SLLdel</code> and <code>DLLdel</code>?</p>
(A)	<code>SLLdel</code> is $O(1)$ and <code>DLLdel</code> is $O(n)$
(B)	Both <code>SLLdel</code> and <code>DLLdel</code> are $O(\log(n))$
(C)	Both <code>SLLdel</code> and <code>DLLdel</code> are $O(1)$
(D)	<code>SLLdel</code> is $O(n)$ and <code>DLLdel</code> is $O(1)$

GATE 2023 Computer Science and Information Technology (CS)

<p>Q.4</p>	<p>Consider the Deterministic Finite-state Automaton (DFA) <math>\mathcal{A}</math> shown below. The DFA runs on the alphabet <math>\{0, 1\}</math>, and has the set of states <math>\{s, p, q, r\}</math>, with <math>s</math> being the start state and <math>p</math> being the only final state.</p> <div style="text-align: center;"> <pre> graph LR     start(( )) --&gt; s((s))     s -- 1 --&gt; p(((p)))     s -- 0 --&gt; r((r))     p -- 0 --&gt; p     p -- 1 --&gt; q((q))     q -- 1 --&gt; p     q -- 0 --&gt; r     r -- "0,1" --&gt; r     style start fill:none,stroke:none     </pre> </div> <p>Which one of the following regular expressions correctly describes the language accepted by <math>\mathcal{A}</math>?</p>
<p>(A)</p>	<p><math>1(0^*11)^*</math></p>
<p>(B)</p>	<p><math>0(0 + 1)^*</math></p>
<p>(C)</p>	<p><math>1(0 + 11)^*</math></p>
<p>(D)</p>	<p><math>1(110^*)^*</math></p>

GATE 2023 Computer Science and Information Technology (CS)

Q.5	<p>The Lucas sequence <math>L_n</math> is defined by the recurrence relation:</p> $L_n = L_{n-1} + L_{n-2}, \quad \text{for } n \geq 3,$ <p>with <math>L_1 = 1</math> and <math>L_2 = 3</math>.</p> <p>Which one of the options given is TRUE?</p>
(A)	$L_n = \left(\frac{1 + \sqrt{5}}{2}\right)^n + \left(\frac{1 - \sqrt{5}}{2}\right)^n$
(B)	$L_n = \left(\frac{1 + \sqrt{5}}{2}\right)^n - \left(\frac{1 - \sqrt{5}}{3}\right)^n$
(C)	$L_n = \left(\frac{1 + \sqrt{5}}{2}\right)^n + \left(\frac{1 - \sqrt{5}}{3}\right)^n$
(D)	$L_n = \left(\frac{1 + \sqrt{5}}{2}\right)^n - \left(\frac{1 - \sqrt{5}}{2}\right)^n$

**GATE 2023 Computer Science and Information Technology (CS)**

Q.6	Which one of the options given below refers to the degree (or arity) of a relation in relational database systems?
(A)	Number of attributes of its relation schema.
(B)	Number of tuples stored in the relation.
(C)	Number of entries in the relation.
(D)	Number of distinct domains of its relation schema.

**GATE 2023 Computer Science and Information Technology (CS)**

Q.7	Suppose two hosts are connected by a point-to-point link and they are configured to use <b>Stop-and-Wait</b> protocol for reliable data transfer. Identify in which one of the following scenarios, the utilization of the link is the lowest.
(A)	Longer link length and lower transmission rate
(B)	Longer link length and higher transmission rate
(C)	Shorter link length and lower transmission rate
(D)	Shorter link length and higher transmission rate

GATE 2023 Computer Science and Information Technology (CS)

<p>Q.8</p>	<p>Let</p> $A = \begin{bmatrix} 1 & 2 & 3 & 4 \\ 4 & 1 & 2 & 3 \\ 3 & 4 & 1 & 2 \\ 2 & 3 & 4 & 1 \end{bmatrix}$ <p>and</p> $B = \begin{bmatrix} 3 & 4 & 1 & 2 \\ 4 & 1 & 2 & 3 \\ 1 & 2 & 3 & 4 \\ 2 & 3 & 4 & 1 \end{bmatrix}.$ <p>Let <math>\det(A)</math> and <math>\det(B)</math> denote the determinants of the matrices <math>A</math> and <math>B</math>, respectively.</p> <p>Which one of the options given below is TRUE?</p>
<p>(A)</p>	<p><math>\det(A) = \det(B)</math></p>
<p>(B)</p>	<p><math>\det(B) = -\det(A)</math></p>
<p>(C)</p>	<p><math>\det(A) = 0</math></p>
<p>(D)</p>	<p><math>\det(AB) = \det(A) + \det(B)</math></p>

GATE 2023 Computer Science and Information Technology (CS)

<p>Q.9</p>	<p>Consider the following definition of a lexical token <b>id</b> for an identifier in a programming language, using extended regular expressions:</p> <p style="text-align: center;"> <b>letter</b> → [A-Za-z]  <b>digit</b> → [0-9]  <b>id</b> → <b>letter</b> (<b>letter</b>   <b>digit</b>)*         </p> <p>Which one of the following Non-deterministic Finite-state Automata with <math>\epsilon</math>-transitions accepts the set of valid identifiers? (A double-circle denotes a final state)</p>
<p>(A)</p>	
<p>(B)</p>	
<p>(C)</p>	
<p>(D)</p>	

--	--

GATE 2023 Computer Science and Information Technology (CS)

Q.10	<p>An algorithm has to store several keys generated by an adversary in a hash table. The adversary is malicious who tries to maximize the number of collisions. Let <math>k</math> be the number of keys, <math>m</math> be the number of slots in the hash table, and <math>k &gt; m</math>.</p> <p>Which one of the following is the best hashing strategy to counteract the adversary?</p>
(A)	Division method, i.e., use the hash function $h(k) = k \bmod m$ .
(B)	Multiplication method, i.e., use the hash function $h(k) = \lfloor m(kA - \lfloor kA \rfloor) \rfloor$ , where $A$ is a carefully chosen constant.
(C)	Universal hashing method.
(D)	If $k$ is a prime number, use Division method. Otherwise, use Multiplication method.

GATE 2023 Computer Science and Information Technology (CS)

<p>Q.11</p>	<p>The output of a 2-input multiplexer is connected back to one of its inputs as shown in the figure.</p> <div style="text-align: center;">  </div> <p>Match the functional equivalence of this circuit to one of the following options.</p>
<p>(A)</p>	<p>D Flip-flop</p>
<p>(B)</p>	<p>D Latch</p>
<p>(C)</p>	<p>Half-adder</p>
<p>(D)</p>	<p>Demultiplexer</p>

**GATE 2023 Computer Science and Information Technology (CS)**

Q.12	Which one or more of the following need to be saved on a context switch from one thread (T1) of a process to another thread (T2) of the same process?
(A)	Page table base register
(B)	Stack pointer
(C)	Program counter
(D)	General purpose registers

**GATE 2023 Computer Science and Information Technology (CS)**

Q.13	Which one or more of the following options guarantee that a computer system will transition from user mode to kernel mode?
(A)	Function Call
(B)	malloc Call
(C)	Page Fault
(D)	System Call

**GATE 2023 Computer Science and Information Technology (CS)**

Q.14	Which of the following statements is/are CORRECT?
(A)	The intersection of two regular languages is regular.
(B)	The intersection of two context-free languages is context-free.
(C)	The intersection of two recursive languages is recursive.
(D)	The intersection of two recursively enumerable languages is recursively enumerable.

**GATE 2023 Computer Science and Information Technology (CS)**

Q.15	Which of the following statements is/are INCORRECT about the OSPF (Open Shortest Path First) routing protocol used in the Internet?
(A)	OSPF implements Bellman-Ford algorithm to find shortest paths.
(B)	OSPF uses Dijkstra's shortest path algorithm to implement least-cost path routing.
(C)	OSPF is used as an inter-domain routing protocol.
(D)	OSPF implements hierarchical routing.

GATE 2023 Computer Science and Information Technology (CS)

Q.16	<p>Geetha has a conjecture about integers, which is of the form</p> $\forall x(P(x) \implies \exists yQ(x, y)),$ <p>where <math>P</math> is a statement about integers, and <math>Q</math> is a statement about pairs of integers. Which of the following (one or more) option(s) would <i>imply</i> Geetha's conjecture?</p>
(A)	$\exists x(P(x) \wedge \forall yQ(x, y))$
(B)	$\forall x\forall yQ(x, y)$
(C)	$\exists y\forall x(P(x) \implies Q(x, y))$
(D)	$\exists x(P(x) \wedge \exists yQ(x, y))$

**GATE 2023 Computer Science and Information Technology (CS)**

Q.17	Which one or more of the following CPU scheduling algorithms can potentially cause starvation?
(A)	First-in First-Out
(B)	Round Robin
(C)	Priority Scheduling
(D)	Shortest Job First

GATE 2023 Computer Science and Information Technology (CS)

Q.18	Let $f(x) = x^3 + 15x^2 - 33x - 36$ be a real-valued function. Which of the following statements is/are TRUE?
(A)	$f(x)$ does not have a local maximum.
(B)	$f(x)$ has a local maximum.
(C)	$f(x)$ does not have a local minimum.
(D)	$f(x)$ has a local minimum.

GATE 2023 Computer Science and Information Technology (CS)

Q.19	Let $f$ and $g$ be functions of natural numbers given by $f(n) = n$ and $g(n) = n^2$ . Which of the following statements is/are TRUE?
(A)	$f \in O(g)$
(B)	$f \in \Omega(g)$
(C)	$f \in o(g)$
(D)	$f \in \Theta(g)$

GATE 2023 Computer Science and Information Technology (CS)

Q.20

Let  $A$  be the adjacency matrix of the graph with vertices  $\{1, 2, 3, 4, 5\}$ .

Let  $\lambda_1, \lambda_2, \lambda_3, \lambda_4,$  and  $\lambda_5$  be the five eigenvalues of  $A$ . Note that these eigenvalues need not be distinct.

The value of  $\lambda_1 + \lambda_2 + \lambda_3 + \lambda_4 + \lambda_5 =$  \_\_\_\_\_.

GATE 2023 Computer Science and Information Technology (CS)

Q.21	The value of the definite integral $\int_{-3}^3 \int_{-2}^2 \int_{-1}^1 (4x^2y - z^3) dz dy dx$ is _____ . (Rounded off to the nearest integer)

**GATE 2023 Computer Science and Information Technology (CS)**

Q.22	A particular number is written as 132 in radix-4 representation. The same number in radix-5 representation is _____.

**GATE 2023 Computer Science and Information Technology (CS)**

Q.23	<p>Consider a 3-stage pipelined processor having a delay of 10 ns (nanoseconds), 20 ns, and 14 ns, for the first, second, and the third stages, respectively. Assume that there is no other delay and the processor does not suffer from any pipeline hazards. Also assume that one instruction is fetched every cycle.</p> <p>The total execution time for executing 100 instructions on this processor is _____ ns.</p>

GATE 2023 Computer Science and Information Technology (CS)

Q.24	<p>A keyboard connected to a computer is used at a rate of 1 keystroke per second. The computer system polls the keyboard every 10 ms (milli seconds) to check for a keystroke and consumes <math>100 \mu s</math> (micro seconds) for each poll. If it is determined after polling that a key has been pressed, the system consumes an additional <math>200 \mu s</math> to process the keystroke. Let <math>T_1</math> denote the fraction of a second spent in polling and processing a keystroke.</p> <p>In an alternative implementation, the system uses interrupts instead of polling. An interrupt is raised for every keystroke. It takes a total of 1 ms for servicing an interrupt and processing a keystroke. Let <math>T_2</math> denote the fraction of a second spent in servicing the interrupt and processing a keystroke.</p> <p>The ratio <math>\frac{T_1}{T_2}</math> is _____. (Rounded off to one decimal place)</p>

GATE 2023 Computer Science and Information Technology (CS)

Q.25	<p>The integer value printed by the ANSI-C program given below is _____.</p> <pre>#include&lt;stdio.h&gt;  int funcp(){     static int x = 1;     x++;     return x; }  int main(){     int x,y;     x = funcp();     y = funcp()+x;     printf("%d\n", (x+y));     return 0; }</pre>

Q.32

A 4 kilobyte (KB) byte-addressable memory is realized using four 1 KB memory blocks. Two input address lines (IA4 and IA3) are connected to the chip select (CS) port of these memory blocks through a decoder as shown in the figure. The remaining ten input address lines from IA11–IA0 are connected to the address port of these blocks. The chip select (CS) is active high.

The input memory addresses (IA11–IA0), in decimal, for the starting locations (Addr=0) of each block (indicated as X1, X2, X3, X4 in the figure) are among the options given below. Which one of the following options is CORRECT?

- (A) (0, 1, 2, 3)
- (B) (0, 1024, 2048, 3072)
- (C) (0, 8, 16, 24)
- (D) (0, 0, 0, 0)

Q.51

Consider the following table named **Student** in a relational database. The primary key of this table is rollNum.

**Student**

<u>rollNum</u>	name	gender	marks
1	Naman	M	62
2	Aliya	F	70
3	Aliya	F	80
4	James	M	82
5	Swati	F	65

The SQL query below is executed on this database.

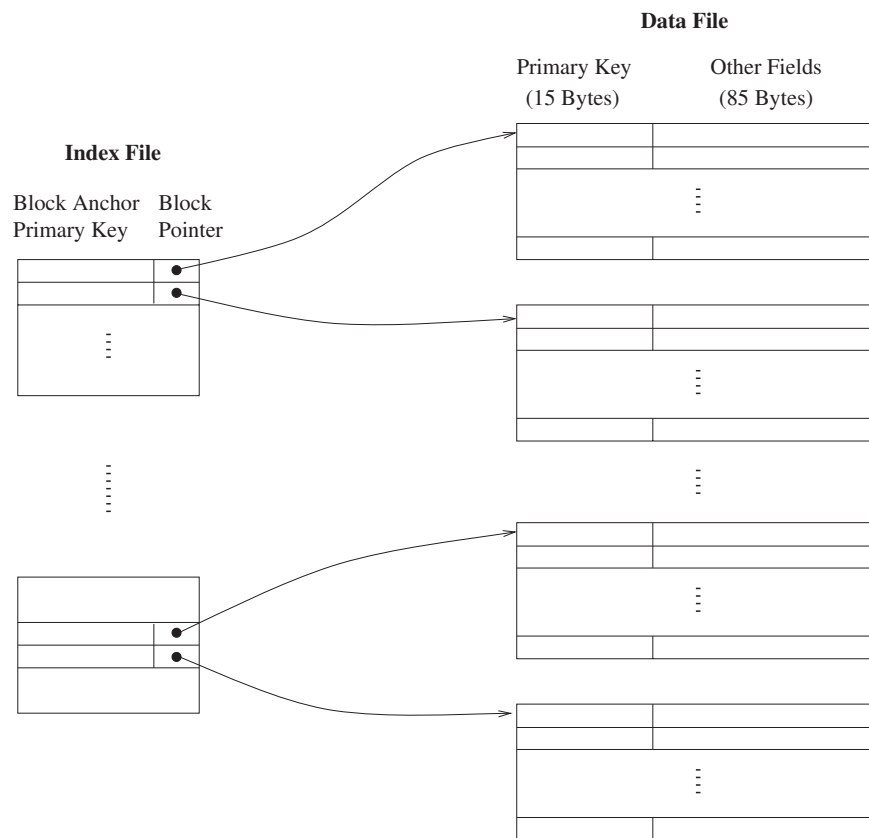

```
SELECT *  
FROM Student  
WHERE gender = 'F' AND  
marks > 65;
```

The number of rows returned by the query is \_\_\_\_\_.

Q.52

Consider a database of fixed-length records, stored as an ordered file. The database has 25,000 records, with each record being 100 bytes, of which the primary key occupies 15 bytes. The data file is block-aligned in that each data record is fully contained within a block. The database is indexed by a primary index file, which is also stored as a block-aligned ordered file. The figure below depicts this indexing scheme.

Suppose the block size of the file system is 1024 bytes, and a pointer to a block occupies 5 bytes. The system uses binary search on the index file to search for a record with a given key. You may assume that a binary search on an index file of  $b$  blocks takes  $\lceil \log_2 b \rceil$  block accesses in the worst case.

Given a key, the number of block accesses required to identify the block in the data file that may contain a record with the key, in the worst case, is \_\_\_\_\_.
